

Please note requirements for lighting and fireproofing for the 2017 Clayfolk Show:

Lighting: Extension cords must be three prong grounded and are colored orange yellow or green. Power bars must be fused and UL approved. Attaching one power bar to another power bar is NOT allowed. In the past, a row of booths went dark so it is important that each booth does NOT exceed 500 watts. Group booth participants will be supplied with lighting. Pop up canopy frames (EZ-ups) are allowed but without the tops..

Fabrics: All fabrics and cardboard structures must be fireproofed or have a certification sticker. The homemade recipe for **natural** fibers is as follows: 5 parts boric acid, 6 parts borax soap, 100 parts warm water by volume. Once dissolved, submerge fabric and hang to dry. Do not dry in a clothes dryer. Commercial sprays do not leave a white residue on the fabrics. Locally you may purchase a MSDS certified spray fire proofing from **Roley's Pacific Supply in Grants 541-479-7578 or 800-400-7578 (allow 3 days for shipping & ask for MSDS certificate)**. Other companies are **Flamort Co.** products in San Leandro, CA www.flamort.com/ 510-357-9494 (call for price and ask for MSDS certificate) and **Firez Off, an on-line Oklahoma company (\$24.95.00 a quart and \$59.95 a gallon plus shipping), MSDS certified spray firezoff.com/ or 405-702-0055.** In the past, several potters have split the cost of ordering the one gallon size.
